NOW A BETTER DEAL FOR BUYERS

You will be able to put more trust in what sales staff say about computers, says the Computer Trade Association which is setting up a training scheme.

Concerned about complaints, members plan to encourage classes at technical colleges and award certificates and diplomas.

Secretary Nigel Backhurst said: "The courses will not teach them how to sell.

"The idea is to give those selling computers a better technical background so that they can give a better service to the customer."

He said the scheme, due to be discussed at a CTA meeting next week, would be self-financing with an exam fee of £5-10.

Mr Blanchard had received more than 30 complaints about misleading advice given in some chain stores, although two large chains stressed their thorough training for staff.

As a result, he toured a number of stores and found that computer knowledge among the sales staff varied widely.

Since a report in Home Computing Weekly, Mr Backhurst has been contacted

by two retail training officers who spoke of their difficulties in providing a general background in computing to their staff.

And two technical colleges offered to run part-time courses.

Now the CTA has in mind inviting more colleges to run courses to improve the computer knowledge of sales people.

The association would check the syllabuses and make two-stage awards. One would be a diploma, equivalent to a C.S.E. and there would be a certificate for more advanced knowledge.

Association chairman Tony Shiel, of Knot Computing, said the type of queries sales staff should be able to answer included the difference

A micro for the poet

A hundred poems by computer in seven hours — that was the goal of Dave Morice's computer poetry marathon.

Seated at an Apple in the window of Books Etc in London's Charing Cross Road, he said: "I've already written two plays, several articles and 100 pages of a novel on a computer. I shied away from the idea at first — it seemed too remote. But now I enjoy it because it's

easier. I wouldn't write a novel with a typewriter. You can make the changes so much quicker by computer."

Dave an American who usually works as a computer typesetter in Iowa City, was writing the poems to publicise his book *Cartoon Poems*, which came out on May 9. He's now working on a new book *Com-*

Tony Shiel — better deal for buyers

between computer languages, what high-resolution means and the difference between eight-bit and 16-bit micros.

Mr Shiel, who said he admired the training Tandy gave to its staff, also wanted sales people taught about the legal side of retailing — not to make claims which the computers could not live up to.

Computer Trade Association, 108 Margaret Street, Coalville, Leics LE6 2LX

New for the 64

Commodore is bringing out a compiler and an extended version of BASIC for its 64 computer.

Petspeed 64, bought from Oxford Computer Systems for an estimated £100,000, is a four-pass compiler which is reckoned to generate code running up to 20 times faster than the original BASIC program.

And Simons BASIC, named after the writer David Simons, adds 114 instructions, including RENUMBER, and is said to give easy access to colour and sprite commands.

Both will cost £50 and are due to go on sale for the 4th International Commodore Computer Show, at the Cunard Hotel, Hammersmith, on June 9-11.

Commodore Business Machines (UK), 675 Ajax Avenue, Slough, Berks SL1 4BG

BBC gives first aid to chemists

The BBC Micro will be giving chemists some first aid, thanks to a new package from John Richardson Computers.

By the end of this year, chemists will be required to print all the labels on the drugs they issue instead of writing them out by hand.

Using the BBC connected up to a printer and disk drive, they can print up to 2,000 different types of drugs and hundreds of different doses — as well as keeping track of their stocks of drugs.

To do this, though, the BBC has to be upgraded to 96K using a special expansion board, which John Richardson believes is the first board of this size ever to be used in a microcomputer.

But at the end of the day, the upgraded micro can still be unplugged and taken home for an evening of programming or games playing.

John Richardson Computers, Unit 337, Walton Summit, Bamber Bridge, Preston, Lancs PR6 8AR

Rent a Spectrum

Sinclair Research has welcomed a lending library...for computers.

Gloucester library has bought 12 of the company's Spectrums for borrowers who leave a £50 deposit and pay £10 for two weeks.

A Sinclair spokesman said: "It seems like a good idea. It can only encourage more people to take an interest in computing."

The scheme is run by Gloucester County Council's technical services department outside normal library hours, on Fridays between 5.30pm and 8pm. If successful, it will spread to other libraries.

WINDOW ON ANOTHER WORLD

NEW RELEASES

STAR JAMMER — Wiping the sweat from my brow, I searched the inky blackness, ahead for signs of enemy fighters. Though Star Jammer was the best ship in the galaxy, my dwindling energy reserves made me doubt I could reach the next stargate. . . (a one player space arcade game requiring 1 joystick)

SUPER SKILL HANGMAN — Hangman as you've never played it before!

A vocabulary of over 1000 words, three levels of difficulty and an optional timer makes this classic word game a challenge for kids of all ages.

NIGHTFLIGHT — An accurate simulation of flying a single engine light aircraft, Nightflight allows for take-off, landing, and aerial manoeuvres including loops and rolls.

SALAMANDER GRAPHICS SYSTEM — A comprehensive picture drawing system for the home computer enthusiast. Pictures in any mode or colour set, text on the hi-res screens, and storage of pictures on tape. Requires 1 joystick.

ORIC TREK — A version of our classic Dragon Trek for the Oric-1! 10 levels of difficulty, 3 sizes of galaxy and more features than you can shake a Klingon at. A must for all Oric owners!

ORIC GAMES COMPENDIUM — Four exciting games for the whole family: Donkey Derby, Kingdom, Viper and Space Station.

Lowdown on the U.S. software game

If you like to read interesting and informative books on computers and related subjects, you will want to write to these people. dilithium Press (the lower case d is correct) is one of the best known quality small publishers around. Here is a very small sampling from their latest catalog: *The Sinclair ZX-81 Programming for Real Applications*; *The Year Of The Robot*; *How to Make Money With Your Microcomputer*; *TRS-80 Color Programs (for the Color Computer)*; plus lots more.

One nice feature is that software for their books is usually available, saving you the trouble and aggravation of having to key it in yourself. The other nice thing is that most of their books cost less than \$16. Write for a catalog. dilithium Press, P.O. Box 606, Beaverton Oregon 97075.

From Abacus Software comes a line of interesting items for the Vic, Commodore 64, and the Pet. Among the 20 or so items in their product line, these caught my immediate attention: *Vic Teny Pilot*, the interactive educational language, \$17.95; *Pet Tiny Pascal*, \$39.95; *Tiny Basic Compiler*, \$19.95; and *Cribbage* (the card game) for \$14.95. If you write to them they will send you a free catalog.

For your information, they charge \$3.00 for postage and handling "elsewhere" and accept U.S. dollars by check, international money order, Access or Barclaycard. Write to them. They are ready for you. Abacus Software, P.O. Box 7211, Grand Rapids, Michigan 49510, (616) 241 5510.

Having a hard time remembering all those details about your ZX-81? Now there is a 10-page reference card available of particular interest to owners of the ZX-81 (we call it the *Timex 1000*). The information on the card covers BASIC commands and functions, special commands, operators, graphics, codes from 0 to 255, useful ROM calls, programming tips, memory maps, timing charts, hex/decimal conversions, op codes, and information on Peek and Poke.

All this and more for only \$5.95 from Nanos Systems Corp., P.O. Box 24344, Speedway Indiana 46224, (317) 244-4078.

If you are an active reader and cannot get your fill of computer books, you might try joining *The Computer Book Club*. At the present time, they are running an introductory offer. You pick your choice of five titles, worth up to \$102.75, pay only \$2.95 for all five (plus shipping), then all you have to do is buy four more books in the next year. All books offered are sold at a discount which is at least 20-75 per cent less than list. There are many other benefits of membership in this very excellent and legitimate book club owned by one of America's largest technical book publishers. Write for details to *The Computer Book Club*, Blue Ridge Summit, PA 17214.

That's all for now. See you next week — same time, same place.
Bud Izen
Fairfield, California

Continued from front page

puter Comics. He said: "It's going to be written on a real simple level for people who don't know anything about computers. It'll deal with the history, sociology and future of computers".

Dave is a computer games enthusiast whose particular favourites are Tron, Frogger and Pacman. Of this poem, written for *Home Computing Weekly*, he said: "It's the longest I've written today. It just shows what happens when you give someone a topic they like."

Alice, who was sitting behind Brian, jumped up and pushed one of the men to get in front of her husband, who was busily playing Pacman. Not discouraged, he turned to the Frogger game a few feet away and hopped over to it. Depositing a token, he watched with fascination as the frog appeared on the screen. The timer began. He moved the joystick back and forth, up and down, and jumped across the electronic highway, then the stream, but alas landed his frog on the back of an alligator, where it sunk. "Alice!" he screamed, "This is your fault. Get over here and quit playing Pacman—it's a waste of money!" She was involved in a heavy game of Tron, though, and was about to lose her tanks...

One of Dave's poems — inspired by computer games

Scott of the keyboard

Selina Scott, now a breakfast TV presenter, handed over the 100,000th BBC micro to the speech therapy unit of Charing Cross Hospital.

It was donated free by BBC Enterprises for use with a device

called Toucan, a voice synthesiser and visual aid which can be programmed with words and phrases for each patient.

Selina Scott at the keyboard with Hugh Rossi, Minister for Social Security and the Disabled, and chief speech therapist Alison Perry

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

Let us program

You could soon be seeing more of your clergyman thanks to a new program which not only saves paperwork but tells him the best route for his visiting rounds.

It was written by 27-year-old Gareth Morgan, who has degrees in both theology and computer science.

His wife Sharon, 25, his partner in Gareth Morgan Computer Services, said: "He decided his real vocation was in lay work and put the two together."

Mrs Morgan explained that the package, running on the TRS-80 model III, is entirely inter-religious — it will work just as happily organising an Anglican church or a Sikh temple.

It is called Kubernesis, which is Greek for administrator (see I Corinthians).

So far two copies, at £150 for disc and 56-page manual, have been sold — one to an Anglican clergyman and one to a Methodist.

The package can record facts on congregations of up to 620, provided the computer has 48K of RAM and two disc drives, including notes like dates of birth, recent illnesses, Sunday School membership and so on.

And it will sort addresses by post code, cutting down travelling time between visits.

The couple are both involved with their local Anglican church. Mr Morgan hopes soon

Oric joysticks

Pasesoft has brought out what it says is the first joystick interface for the Oric-1.

It costs £14.99, including a free game called Tracer Racer, and will run one or two Atari-type joysticks.

The company, which recently combined with Ozark Software, has just launched six tapes for the Oric, all priced at £4.99. They are: Adventureland, Five Alive, Worm, Pioneer 1847, a machine code monitor and a disassembler.

Pasesoft, 213-215 Market Street, Hyde, Cheshire SK14 1HF

to be a lay preacher and Mrs Morgan is a member of the Parochial Church Council.

Mr Morgan, a freelance consultant working on IBM mainframes, wrote Kubernesis over nine months.

They suggest purchasers also buy a word processing package to speed up sermon writing and production of newsletters.

And there are more ideas in the pipeline, including a package which will plan visits by preachers to circuit Methodist churches and another which will produce statistics on baptisms, weddings, funerals and confirmations.

One clergyman has also suggested a program which will search a database of hymns to find one most suitable for that week's sermon.

Gareth Morgan Computer Services, 34 Avon Park, Bristol BS5 9RS

K-tel: more sign soon

More software companies would be signing deals with K-tel, known until now for heavily advertised record albums, to distribute 15 titles by dk'tronics.

Mr Moulds said: "I expect more signing within weeks. I can't be more specific — we are talking to a lot of people simultaneously — but we have the capacity to handle up to a dozen ranges easily."

K-tel says its store-by-store system can distribute software more efficiently than present methods.

K-tel International (UK), 620 Western Avenue, London W3 0TU

Packed with TI programs

Home Computing Weekly contributor Vince Apps has just published a book of 35 programs for the standard TI-99/4A.

They are mainly games — including a 3D maze — plus some for educational and household use. The Texas Program Book, published by Phoenix Publishing Associates, costs £5.95.

Phoenix Publishing Associates, 14 Vernon Road, Bushey, Herts WD2 2JL

We're the cheapest

Clement Chambers, boss of software CRL, claims he has broken a price barrier by bringing out four cassettes for the ZX81 which retail at £3.50 each.

Mr Chambers said: "We decided to break new territory in price because we thought young children can't afford more on their pocket money.

"We are not making as much profit, of course, but there are about half a million ZX81s about and we hope to sell more as a result.

"This is the first time at these prices in a retail outlet. If I'd had one of them two years ago the price would have been £6.95."

The four games, on sale in John Menzies, are Escape from Manhattan, J.D. Arcades, 10 1K Games and Alien Rain/Outrider.

CRL, 140 Whitechapel Road, London E1 1EJ

TI's two offers

Texas Instruments, now advertising its TI-99/4A on TV, is making two offers to buyers.

All purchasers sending a form to TI will get products worth £50 free: a pair of joysticks, a BASIC tutorial cassette and a software cartridge.

And anyone buying six cartridges for the TI-99/4A can get a free speech synthesiser or cassette recorder. Both offers end on July 2.

Texas Instruments, Manton Lane, Bedford MK41 7PA

Survival is the game

Newly-formed Linus Software is bringing out its first tape, an adventure called Armageddon, based on survival after a nuclear holocaust. Running on the 16K ZX81, it will cost £4.50.

Don't be fooled by micro ads

One thing that never fails to amuse me is the advertising blurb that companies release to sell their computers, software and peripherals. I have noticed several distinctive styles of computer ads in the time that I have been computing. Here are a few of them.

1 The "Buy-it-for-the-children" approach. This method is usually deployed in the High Street stores to catch parents unawares, and is most prevalent at Christmas. According to the blurb, the children's education will suffer unless you rush into the shop and buy a particular brand of micro or piece of software.

However useful micros may be as teaching aids, I think this "buy it or else" tactic is pretty unscrupulous. Anxious parents might end up struggling financially to buy their little Freddy a home computer of his own after seeing such ads.

2 The "We've-got-more-than-them" technique. The first colour and sound micro and 3½K RAM (despite exaggerated claims to 5K), the next had 16K, followed by 32, then 48, and now 64K. Who really uses all that much memory? How soon will it be before a company claims to have a 256K machine with a 50-colour display and quadrophonic sound, all for under £100?

3 Possibly the ugliest side of computer advertising is the downright lies that are told by some companies about their products.

The offenders shall remain nameless, but for example certain companies have shown in their ads pictures on a television screen that could not possibly be produced on their product—just the thing to fool, and disappoint, an uninitiated beginner to computing.

Another misleading element is the specifications chart showing selected aspects of the micro being promoted compared with the competition. The worst I have seen showed the machine's capabilities with the words "NO COMPARABLE COMPETITION" scrawled across the spaces left in the table for the BBC Micro, Apple, and "Japanese imitations". What about the features they left out?

4 This section shows how desperate computer manufactures are getting for new customers. I refer of course to the Channel 4 advert where a row of bespectacled men feed facts into different computers, which all come up with the same make as the best. This kind of petty sniping is just laughable.

To conclude, I would advise any prospective computer buyer to read a lot of magazine reviews before taking the plunge of buying computer hardware or software. These reviews often present a much better picture of the product than an advertisement ever will.

Mark Phillips
Student, Eastleigh, Hants

More than just games for the VIC and 64

VIC-20 and Commodore owners who don't just want to play games take note. Marketing Micro Software has some new programs which could be right up your street.

Practicalc, a spreadsheet program along the lines of VU-Calcul, will carry out mathematical calculations for you. It could be used to work out the best value for money from a range of insurance policies — or home computers, perhaps. According to MMS, it's the first spreadsheet available for the VIC and 64.

Composer will produce sound and notation for simple tunes, and Maths Duel is designed to develop children's mathematical skills.

Just for VIC-20 owners there's VIC Sketch, a graphics program which will create on-screen drawings in any of seven colours using keyboard or joystick. And VIC Pak is a cornucopia of useful programs, one to work out your mortgage, another to calculate your life expectancy, and five others too.

MMS's managing director Colin Aldridge said: "We feel there's a lot of scope for good business and educational programs that don't cost the earth. We're aiming at the home computing user with enough interest to get their machines doing something apart from playing Jellymonsters."

In June, he said, MMS would be launching further pro-

grams to back up Practicalc, including a word processor.

But just to show that it doesn't think computing is all work and no play, MMS has brought out five games for the Commodore machines. They are Barrel Jumper, Johnnie Jumper, Reversal, Reflections, and Road Test.

Marketing Micro Software, Whitehouse Industrial Estate, Ipswich, Suffolk

Easier BASIC

A new version of BASIC, designed to be easier to use for beginners, has been launched by Digital Research.

But it costs £100 and is only available at present on the company's 16-bit family of operating systems, including CP/M-86 and Concurrent CP/M-86. It needs a disc system and at least 96K of RAM.

Paul Bailey, director of European operations, said Personal BASIC came with a step-by-step manual and checked for syntax errors while a program was being typed in, giving error messages in standard English.

Personal BASIC includes an editor and debugging aids, including statement number and variable tracing.

The new language costs £100 for one purchase with discounts for companies who want to include it in their own packages.

Digital Research (UK), Oxford House, Oxford Street, Newbury, Berks RG13 1JB

BBC SPECTRUM VIC 20

Real educational programs written BY teachers WITH programmers FOR children.

MAN - co-ordinates/compass points super graphics! £5.95

PUNC-MAN - he gobbles the punctuation marks. You put them back! £7.95

And lots more! Send SAE to:

- ONLY £5.95 INC. P&P

ZX Spectrum FROGGY 16K or 48K

Spectrum version of Arcade Game with Full Arcade Features -

- * Fabulous Hi-Res Colour Graphics
- * Authentic Sound Effects + 3 Tunes
- * 3-D Logs, Swimming & Diving Turtles
- * 3 Lanes of Multi-coloured vehicles
- * On-screen Score, Hi-Score, Time-bar
- * Snake, Alligators and Baby Frog
- * 'Top 5' High-Score initials table
- * Demonstration Game routine

Your home-sick frog must leap across a busy main road, then onto logs and turtles in the river to reach safety of the river-bank frog-homes. THIS MACHINE-CODE GAME MUST BE SEEN TO BE BELIEVED!!
 ONLY £5.95 INC. P&P

**TEST YOUR SKILL, PIT YOUR WITS OR JUST TRY OUT YOUR SPIRIT OF ADVENTURE!
 HAVE YOU GOT LIGHTNING REACTIONS? HOW ARE YOUR POWERS OF DEDUCTION?
 WHAT IS YOUR IQ?**

We have the hottest computer games on earth for you to take yourself to the limits and find out the answers to these questions . . . and more!

TRY OUR GRAPHIC ADVENTURE GAME . . .

STARSHIP ESCAPE FOR THE VIC 20 WITH 16K EXPANSION

A Compelling and Exciting Real Time Graphic Adventure in Machine Code. You are the lonely pilot of a Federation starliner about ship on routine patrol. While travelling through a little known sector of the galaxy you are confronted by a gigantic alien craft. Before you can take evasive action a powerful tractor beam draws your craft into the alien ship, your craft is disassembled and each part is put in a different room of the ship. Now your quest begins. You must move from room to room in search of each part, overcome the dangers there and bring the parts back to the airlock where you must reassemble your craft and make good your escape. Programmed in Fast Machine Code. Hi-Res Colour Graphics. Super-sound effects. Joystick or keyboard control. 4 levels of play. Price £9.95

POPULAR ARCADE STYLE GAMES FOR THE UNEXPANDED VIC 20.

SKRAMBLE - Your task is to pilot your aircraft into the enemy's underground base and destroy their installations and guided missiles with your bombs and laser cannon. If you survive the first stage a storm of fireballs appear in your flight path and the only action you can take is evasion. Superhuman pilots have been known to continue bombing and shooting the enemy while out manoeuvring the fireballs. Programmed in Fast Machine Code. Hi-Res Colour Graphics. Super Sound effects. Joystick or keyboard control. Progressive difficulty of play. Price £7.95

JUMPIN JACK - Cross a busy road and treacherous river and guide Jack the frog home to his overide lair. Why you may ask does he have to get across the road and river when he could stay where he is in safety. All is explained when we tell you that his wife is waiting for him on the other side! This program is probably the best Frog pub-arcade game there is for the unexpanded VIC 20. Multicolour Hi-Res Colour Graphics and novel musical sound effects are used to create one of our most popular games. Complete with cars, trucks logs and turtles. Operates from the keyboard or joystick. Progressive difficulty of play. Bonus levels. Price £7.95

TRIAD - Defend your base against the suicidal blitz of alien hoverships. The game is the space battle. Operators and you will need accurate control of your laser cannon to defend your base against constant bomb attacks. The best version of this exciting arcade game on the VIC 20. Double points, shoot flags and 5000 points bonus flags. Programmed in Fast Machine Code. Hi-Res Colour Graphics. Great sound effects. Joystick or keyboard control. Price £7.95

GRIDTRAP - Your man has been placed on a grid of traps which open after he walks over them. His object is to reach and defuse a time bomb in less than 60 seconds. Further hazards are presented by a series of mines scattered around the grid which cannot be walked on and a wandering 'BOOT' which must be avoided. The more you play this one the harder it gets as more 'BOOTS' appear. Bonus flags are set around the grid when he walks over them and a bonus life at 100,000 points. Programmed in Machine Code. Hi-Res Colour Graphics and novel musical sound effects. Joystick or keyboard control. Progressive difficulty of play. Price £7.95

ASTRO FIGHTERS - A Space duel for two players at once. Probably the only VIC 20 game of its type where one player uses the keyboard and the other a joystick. Each player must duel against his opponent and destroy his Astro Fighter. Each battle takes place in a different sector of space and the computer also plays against the two players by placing the ships amongst dangerous sectors of space. Programmed in Machine Code. Hi-Res Colour Graphics and exciting sound effects. Game time selection. Joystick essential. Price £6.95

SCORPION - The scene is the desert and you must defend yourself from a trail of scorpions which wind their way down to your position through scores of poisonous cacti which give off deadly spores. As each scorpion is killed the trail breaks up and they attack individually as they reach you. The cacti may also be destroyed as they are going cover to the scorpions. A deadly soldier also makes its way across your path and must be out manoeuvred or destroyed. A very fast moving and exciting game programmed in Machine Code. Hi-Res Colour Graphics and sound effects. Joystick or keyboard control. Price £7.95

SPACE RESCUE - The crew of a stranded survey ship have to be rescued from the surface of a remote planet by a shuttle craft from another ship. The shuttle has to be guided through a storm of meteors and landed on one of three landing pads where the crew may board. The return trip to the mother ship has to be completed while avoiding the meteors again. Your craft has a limited amount of laser power and some of the meteors can be destroyed as you pilot through the storm. You will also proceed yourself a skillful pilot if you survive the trip and bring the whole crew back to the mother ship. A very good version of the popular arcade game written in Machine Code and using Hi-Res Colour Graphics and sound effects. Progressive difficulty of play. Operates from a Joystick or the keyboard. Price £8.95

CHOPPER - The scene is a battle ground and you are the pilot of an attacking helicopter. Your task is to bomb tanks, trucks and gun emplacements and avoid their attacks of anti-aircraft fire and guided missiles. Your task is made harder by the steep sided valley of the battlefield. Programmed in Machine Code. Hi-Res Colour graphics and sound. Progressive difficulty of play and Joystick or keyboard control. Price £6.95

Also from the same range . . .

PUZZLE PACK - A compendium of six intriguing puzzles, games and IQ tests for the unexpanded VIC 20. Specially written by an expert in puzzles to be both entertaining and educational for all ages and abilities. Programs include: ORBITS, KNIGHTS MOVE, GRAPHIC TWISTER, RAINBOWS, SLIDE PUZZLES, DIGITS.

DESTROYER - Command the HMS Victory in an air and submarine attack. Machine Code. Hi-Res Graphics. Joystick NOT required. Price £7.95

GUNFIGHT - The classic western shootout. Two players together or one player against the computer. Machine Code. Hi-Res Graphics with sound. Joystick or keyboard. Price £6.95

MULTITRON - Lightning responses are demanded when manning the laser cannon of your galactic starfighter as it comes into combat with a variety of creatures who guard the space lanes to their star system. Your task is to penetrate their defenses and destroy each adversary before they destroy your craft. If you survive each attack wave and the deadly Tron-mines you will have to navigate along a winding space corridor. One false move and your ship will be disintegrated by the anti-matter field. An exciting and amusing game written in Machine Code. Hi-Res colour graphics with sound effects and Joystick control. Price £7.95

AVAILABLE SOON FOR THE COMMODORE 64!

JUMPIN JACK - Our very popular Frog game now on the 64 with numerous features. Snakes - Crocodiles - Lady Frog - Two player options - Multiple levels of play - Switch or analogue joystick operation - Keyboard operation - Sprite Graphics - Hi-Res Multicolour Mode Graphics - Synth Sound. Price £9.95

ALSO COMING SOON - INVADERS 64

You asked for it, Mr Williams

Geoffrey Williams (One Man's View, HCW No. 10) appears to be as ignorant of the software industry as he is of ornithology (sparrows don't peck at milk bottle tops — blue tits do). For his information, the cost of producing a program on cassette is

Cost of cassette: this varies, but after paying a professional artist to design an insert, get the inserts and cassette labels printed, have the tape professionally duplicated, packed and delivered, will be well over £1.50 per unit, even if you have several thousand produced

Office rent: £3.5 per square foot.

Rates: Domestic ratepayers would be horrified to see our rates bill

Electricity: again, business users pay more than domestic users

Telephone: and again. You have to spend a lot of time on the phone in this business.

Wages: outside experts, office cleaning, other programmers, salespeople, office junior etc.

Computers: to adapt programs for 10 to 15 different computers, we need that number of machines, plus printers, cassette recorders, TVs etc. This represents a large capital investment.

Insurance: one delivery van, one sales vehicle, premises and equipment cost a lot to insure.

Advertising: £500-900 for one full colour page.

Miscellaneous: maintenance, stationery, furniture, petrol, postage, packing and depreciation.

The biggest item I have not yet mentioned — development cost. Suffice it to say that a programmer can earn up to £20 an hour in industry

In short, if Mr Williams can develop and produce a program for £1.50, I wouldn't buy it.

I also find Mr Williams' attitude towards women particularly objectionable. I am not an ardent feminist, nor do I propose to launch into a tirade about attitudes. But look at it this way. Would Mr Williams be "asking for it" if he was robbed by force of the books he offers for sale?

Send your letters to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page

It's hardly reasonable to discuss the software industry in terms of an emotive and horrifying subject such as rape. Is Mr Williams one of those sub-humans who think that all women are "asking for it" and like "it" really?

Jean Frost, Jaberwocky Software, Birmingham

Our software's not so costly

Peter Sweasey (issue 9) asked why our program Black Crystal costs £7.50. I would like to point out to him that the Black Crystal package contains two cassettes, making the cost of each cassette only £3.75. Each cassette contains three programs, making the cost of each program £1.25. At the present time there is no way we could reduce the price

There are many amateur accountants around who think they know how to price games more than the software houses. Fortunately for them they are not in charge of a software house.

Geoffrey Williams in your One Man's View column in issue 9 tries to compare the music industry with computer games manufacturing. He states that a full-price LP retails at only £5.95 or thereabouts. I wonder how much that LP would cost if only one million record players existed in the world.

Software manufacturers that are going to survive will price their wares realistic. Not so cheap that they can't develop new products and not so expensive that they price themselves out of the market

S.A. Galloway, Carnell Software, Slough

Put us in the picture

I think that all companies that produce software for computers should be made to follow in the footsteps of Romik in showing exactly what the screen looks like at some point of the game on the inlay card. This would show an honest picture of the game instead of some weird and elaborate drawing of something that never gets anywhere near the screen.

As well as this any advertisements should show what the screen looks like.

This might cut down the number of people who buy a cassette and then find they haven't got what they had expected from the elaborate drawings.

Simon Vincent, Dukinfield, Cheshire

Setting the listing straight

With regard to my Atari Character Generator program, published in issue no. 6, it appears that certain oddities have appeared in the listing. The corrections are as follows:

Lines 1120,2085,2140 — the character in quotes should be a diamond, gained by pressing control and full stop at the same time.

Line 6220 — the character in quotes is an inverse space.

Line 10120 — the character in quotes is a clear screen.

Also, in issue 7, my article on display lists appeared to lose the end of two lines. They are:

Line 20 — 20 DL = PEEK(560) + PEEK(-561)*256

Line 30 — 30 POKE DL,71.POKE DL + 6,7

I hope this clears up any queries.

Marc Freebury, Reading

Shop around for your micro shop

I recently bought a 48K Oric-1, after many month of hard work, since I am still at school. The manual? is very skimpy on the subject of which cassette lead to buy, and the manager of the shop from which I bought the computer was even less helpful.

He firstly sold me the wrong lead, and then informed me that my cassette recorder was incompatible with the computer. So after even more saving. I bought a new recorder, but it still wouldn't work.

A new lead was purchased, but this only enabled me to save programs and not load them. The manager has now gone on holiday, and so there will be even more delay before I will be able to get the recorder to work properly.

So if you're thinking of buying a computer, make sure you buy from a shop where you will get good service, and where the shop assistants know what they're talking about

Neil Clarke, Nottingham

Stripes on the borderline

Here is a program for the Spectrum that creates a multi-coloured, striped border.

```
10 PAPER 7: INK 0: BORDER 7
20 CLS
30 PRINT AT 1,5:CHR8 127:"
1983 Andrew Wiseman"
40 PLOT 8,8: DRAW 239,0:
DRAW 0,150: DRAW -239,0:
DRAW 0,150: DRAW -239,0:
DRAW 0,-150
2: BORDER 3: BORDER 4:
BORDER 5: BORDER 6:
BORDER 7: BORDER 0:
PAUSE 1: GO TO 50
```

You can leave out most of the program; only line 50 is essential to make it work. It appears that PAUSE 1 causes the Spectrum to hold all the colours in line 50 on the screen at the same time.

Good luck with the continued success of the magazine.

Andrew Wiseman, Huntingdon, Cambs

Prentice-Hall

computer books month

June '83

New and best-selling computer books published by Prentice-Hall and its associated imprints—Brady, Reston, Reward and Spectrum—will be on display throughout the country in June.

FEATURING— The ZX Spectrum—Your Personal Computer

Ian McLean, Simon Rushbrook Williams & Peter Williams

Written in an informal, friendly style, this practical guide to the ZX Spectrum is ideal for first-time users. Clear diagrams show you how to master the Spectrum's keyboard and press the correct keys for various functions. Storing information, making calculations, sound, and graphics are carefully explained, and there is a special section on making music on the Spectrum.

£5.95 240 pages 13-985028-7 May 26th '83

Also on display will be books on the BBC Micro, IBM PC, Commodore 64, ATARI, VIC, Z-80, 6502, CP/M, UNIX, Interfacing UCSD Pascal . .

Programs to fight your battles for you

Red Shift was set up by two wargame enthusiasts to produce computerised games of strategy. Julian Fuller and Helmut Watson talk to Candice Goodwin about their approach to computer gaming

"We're into getting people sitting round computers in groups. I think arcade games are incredibly anti-social. What's the point of playing against computers when you can play against people?" So says Julian Fuller of Red Shift, a new company which is attempting to combine the best of traditional games of strategy with the best of computer gaming.

Red Shift is run by Julian Fuller and Helmut Watson, with a little help from various friends. Both are wargame enthusiasts who taught themselves programming while they were unemployed after dropping out of college.

Julian had been at North London Polytechnic's School of Independent Study doing a course in games design, but left after a year "because there were no teachers to teach it". Helmut studied maths, computer science and statistics.

Helmut has been playing wargames all his life — his father was in at the beginning of one of the first groups in the world. His father also taught Julian about wargaming, and that was how the two first met.

Red Shift started more or less by accident. Helmut and Julian started working on *Miniature Wargames*, a monthly wargaming magazine now into its second issue. Offices were needed for the magazine, and the premises they found, at 12C Manor Road, Stoke Newington, London N16, just happened to have a shop downstairs.

With help from the magazine's backer they opened *Conflict*, a shop selling board games, games of strategy, war game accessories — and a range of computer software. But they were not impressed with a lot of the software they saw, and so the idea of Red Shift was born.

Now Helmut concentrates on programming, while Julian writes for the magazine and takes care of the business side of all three businesses — the magazine, the shop and the software company.

Red Shift's first program — *Time Lords*, a "five person, five dimensional game" for the BBC B — has been on the market for just over a month now. It was written mainly by two programming friends, and "tidied up" by Helmut and Julian.

The concept of the game is completely original, and it could take hours or days to play. Each player takes the role of Time

game, but compensation will speed up "housekeeping" aspects like calculating the number of "revenue points" that determine the value of the players' territory.

It will also offer up to nine ways of attacking, instead of the board game's six. As well as armies and missiles, the player will also be able to use ships.

Helmut and Julian are also working on programs designed to be used alongside rather than instead of a board-based game. This is because, for the dedicated wargamer, there are some things a micro can never replace: the realistic model armies and towns used in the games are an important part of the wargame's mystique.

But they feel the computer could have a role in cutting out a lot of the laborious calculations that arise from the wargames' highly complex rules.

Helmut said: "Using computer moderators to run battles could speed up the game and

Helmut Watson — a wargamer all his life

Lord for one of the five races of the universe, and must fight battles and use cunning to defeat the other four. Players can move backwards and forwards in time, setting time traps for each other and changing the course of history.

Julian said: "It's selling OK, but I've got to go out and do some legwork to promote it". But *Time Lords* has already made a deep impression on one customer at least. Helmut says he sold one to a man who didn't even have a BBC Micro.

"I think he's going to buy a micro just so he can play *Time Lords*", he said.

Red Shift's next game, due on the market in about a month, will be *Apocalypse*, a version of a classic board game of strategy adapted for the 48K Spectrum. *Apocalypse* is a bit like games such as *Diplomacy* and *Risk*, and involves trying to take over the world by deploying troops and fighting battles to gain territory.

The computer version will be basically similar to the board

make it more realistic, because more factors could be taken into account. On the other hand, it might not speed the game up at all, because you could spend more time thinking out what to do next."

Compared to arcade games, selling games of strategy is uphill work.

"It's quite a specialised market", Julian said. There is also a certain amount of consumer resistance to be overcome

PROFILE

because "you can't just sit down and play games of strategy for five minutes. It takes a while to learn — although the enjoyment lasts forever".

Then there are the technical snags to be overcome. Strategic games use a large database, so memory — or the lack of it — is a constant problem. Using more machine code would help, but because the games tend to be extended and adapted as they go along, it is easier to write them in BASIC.

The original computer games of strategy didn't have this problem because they were written for large computers with access to disks. Red Shift is eagerly awaiting the arrival of low-priced disk systems for home micros — particularly the Spectrum. "The Microdrive will make a big difference" Julian said. "You can't do games of strategy properly on cassette".

Both Julian and Helmut come in for a lot of criticism over their interest in wargames, but they feel that the attacks on their hobby are unfair.

Julian said "If anyone

Julian Fuller

hates war, it's war gamers, because they know what it's all about. They know how devastating the effects can be. A higher proportion of wargamers are pacifists than in the community at large.

According to Helmut "There's a educational element too. I've got an extensive

knowledge of military history because of wargames. They have to be realistic, so you have got to do a lot of research — and that goes for science fiction games too.

To finally silence the critics, Red Shift is planning to bring out

a game of "international intervention". It is being designed on the office Apple, using a Visual package but will be sold for the BBC, Spectrum and possibly the Dragon too.

The object of the game? To maintain world peace.

DRAGON PROGRAM

Find the facts fast with a Dragon database

You'll find uses for this database both at home and at work, say writers John Sharp and David Bolton

You could use our Dragon Database program to keep track of your record collection — and the character search feature makes it easy to find an entry fast.

It could also be used in a small business to store customers' names, addresses and purchases or to keep a stock list.

The program is essentially a series of sub-routines to handle to seven functions in the menu. Each is independent, so the program would run without a particular sub-routine provided no attempt is made to access it.

After typing in the basic program, up to line 230, you can test each sub-routine in turn by entering sample data and

checking that the results are what you would expect

You could add to the program by displaying the number of records which have been entered, titling the fields, sorting on the surname and, if you have a printer, make the database into a mailing program to print address labels

Hints on conversion

Dragon BASIC is fairly standard and should convert quite easily to other computers. If yours does not have the IF...THEN...ELSE command you will have to use IF...THEN and follow it by the not-equals command.

The back-slash character (\) means go to the tape recorder and, if equipped with remote, it will turn it on and off where necessary. Otherwise it will remain on. INKEY in some lines could be replaced with GET.

• This program is taken from *The Power of the Dragon*, published at £5.95 by Microsource, 1 Branch Road, Park Street, St Albans, Herts

How it works

5 reserves memory, dimensions array AS for maximum number of records, fields
 20-40 enter number of items and fields per item, check for maximum value
 100-230 clear screen, display menu, request option, select sub-routine return if choice invalid
 1000-1020 start of update sub-routine select record, check validity, set variable DI (Data In) for use by other sub-routines, display record number chosen
 1030-1070 loop executed for each field, contents printed by line 1040
 1050-1080 clear line for update input update, if return pressed get next field, press space for next record
 1090-1100 wait for key press, check for space bar
 2000-2040 start of display sub-routine, check variable DI for data (if none return to menu), clear screen, request record, clear X\$ to store input, display record number, check validity, print record number, display field
 2060-2090 wait for key press, if up arrow display preceding record, down arrow for next record, if neither find record starting with key pressed
 3000 start of search sub-routine check for data, clear screen, zero variables
 3010-3040 choose leading character

of embedded character search
 3050-3070 select range of records to be searched and which field
 3080-3100 confirm values are valid input search string
 3110-3131 start FOR NEXT loop
 10 search each record, using INSTR to search left-most part of fields, if found go to 3500, bypass embedded string search
 3140-3190 search for string, print message if unsuccessful and return to menu
 4000-4050 start of sort sub-routine, check for data, clear screen, select record range and field, check validity
 4060-4200 check if record is empty, look at each record in turn and reverse position if sort field has higher value than the next, display "sorted", short delay, return to menu
 5000-5080 start of sub-routine to store data on tape, test for data, print title, ask for file name, set up tape recorder, say data is being saved
 5090-5180 open file to be output write to tape, save each record and field, close file, tell user, wait for response, return to menu
 6000-6170 sub-routine to bring data back into computer, essentially the reverse of sub-routine starting at line 5000

NO. 1 FOR THE DRAGON

DRAGONWARE CATALOGUE

The Dungeon stocks the widest range of Dragon 32 software in the U.K.

Send for our 30-page Dragonware Catalogue (50., refundable on first order — free to Club members) *Latest games* 'Donkey King' £8.00, 'Colorpede' £8.00, 'Talking Android Attack' £8.00, 'Missile Defender' (Tiger Software) £5.75, 'Strategic Command' £9.99. *Latest Books:* 'Dragon Extravaganza' £5.50, 'Making the Most of your Dragon' £5.95, 'Advanced BASIC for the Dragon' £6.95.

Latest Utilities: DASM Assembler £18.95, Hi Res Machine Code Cartridge (51 x 24 screen, 10 character sets, hi-res text, sprites, etc.) £25.30, Dragon FORTH AND Tutorial £18.95, Telewriter £49.95, Dragon Doodles & Demos £5.00

DRAGON STICKS!

Top quality double potentiometer joysticks for the Dragon owner who demands arcade action. Ultra-sensitive, but tough and reliable, Dragon Sticks will keep on zapping when others fail! £19.95 per pair inclusive VAT and postage.

DRAGON OWNERS CLUB

The Dungeon is also the home of the largest Dragon Owners Club in the U.K. (or, since members are scattered through Europe to Africa and the Middle East, should we say "the world"!). The Club magazine, "Dragon's Teeth", is published monthly and includes news, reviews, advice and information exchange for dedicated Dragon-bashers. Free members' adverts, monthly offers (some members have already saved the cost of their subscription), competitions and, for extrovert Dragonards, badges and bomber jackets! *Annual Membership:* £6.00 (£8.00 overseas). Six-month Trial Sub. £3.25 (£4.25 overseas.)

Take a tip for your micro

Make a beep VIC-20

An interesting feature of the Sinclair Spectrum is the small click from the speaker when you press a key on the keyboard. The following routine will allow the VIC-20 to do this.

The routine uses sound location 2 (location 36875). This means that any program which uses sound could be affected while this routine is active. You can disable the routine by pressing STOP/RESTORE. The routine is initialized with SYS 830.

The routine is located in the cassette buffer starting at location 830. Listing 1 is the 6502 assembler code and listing 2 is a BASIC loader for the routine.

Listing 1

```

Kevin Irving

Algebra made easy VIC-20

This short program will help readers struggling to do their algebra homework. It enables you to plot a graph of an algebraic function, simply and quickly.

You type in the function to be plotted in line 80 — here it shows the function $Y = (X - 2) * (X + 2)$. Line 81 is used here to stop any values of Y greater than 10 being generated, as these will be off the screen and could lead to the program crashing.

The graph will be displayed for a few seconds only. But you can see it again and again by pressing key F7.

Though this program is designed for the VIC-20, it would be easy to adapt for other machines. The VIC has a screen of 23 lines, each line 22 characters long. For a machine with L lines each N characters long, alter the program as follows:

```

18 FOR Z = - (N * L / 2)
to (N * L / 2) STEP N
Line 35 Replace 22 with N
Line 52 Replace 22 with N
Line 81 Replace 10 with L / 2
    
```

```

2 PRINT " CLEAR
SCREEN "
12 X1=7929: X2=7928 POKE
36879,8
17 FOR Z=-4 TO 15: POKE
X2+Z, 64: NEXT
18 FOR Z=-220 TO 220
STEP 22: POKE X2+Z, 106.
NEXT
30 FOR X=-4 TO 15
33 GOSUB 80
35 P=(X1+X) - 22*Y
    
```

```

36 POKE P, 42
40 NEXT X
45 FOR T=1 TO 4000: NEXT
50 FOR X=-4 TO 15
51 GOSUB 80
52 P=(X1+X) - 22*Y
54 POKE P, 32: NEXT
60 GET AS: IF AS="" THEN
60
61 IF AS="F7" THEN 2
63 GOTO 60
80 Y=(X-2)*(X+2)
81 IF Y > 10 THEN Y=10
82 RETURN
    
```

Chris Cattanach

Cure that wobble ZX81

I've used this cheap cure for ZX81 RAMpack wobble successfully for about a year now.

The main cause of wobble trouble is that each time you press a key, the connections between the ZX81 and the RAMpack flex because they both touch the table.

My answer is to raise the RAMpack by raising the back of the ZX81, and by improving the fit of the connector.

This is how to do it:

1. Fix a strip of half-round rubber across the underside of the ZX81 using double sided adhesive tape. The rubber I used is about 3/8" thick and is the kind used in metal door frames. The actual thickness is not critical, provided the RAM pack clears the table comfortably. The strip fits just behind the rear rubber feet.
2. Find a piece of file binder which is used to grip papers. It has a cross section like a U shaped channel and the paper is gripped in the channel. It should be about 1/2" wide. Cut a piece off and fit it so that it goes into the ZX81 connector slot and grips the lower edge.
3. Fit a piece of 1/2" wide self-adhesive rubber foam across the RAM pack just above the connector to act as a cushion.

4. Clean the contacts at the back of the ZX81 with a little meths on a cotton bud, till they are bright. Then push the RAM pack into place taking care not to use force. It should be a close fit and grip nicely.
5. Now connect up TV and power. If the K cursor does not appear, then go back to instruction 4.
6. Key in PRINT PEEK 16389/ Newline; 128 should be printed. If not go back to instruction 4.

Geoffrey Genever

Found! AND and OR Sharp MZ-80K

Have you ever wondered why the logical operators AND and OR are not supported in Sharp Basic SP 5025? Well, although it's well hidden, the Sharp manual does give the answer for MZ-80K owners on Page 113.

It all revolves around the famous Boolean Logic — don't run away! It's not as complicated as it sounds... and the famous AND and OR are available to Basic SP 5025 users.

The * is a logical multiply (AND) whilst the + is a logical add (OR).

For the logical operator AND, the resultant condition will be true if the first condition and all other conditions are true. If either of the conditions are false, then the resultant condition will be false.

The rule for the logical operator OR is: the resultant condition is true if either the first or any subsequent condition is true.

Now — most logical operators are found within IF/THEN statements so for lines like:

```

100 IF A < 6 AND B=0 THEN
1200
substitute
100 IF (A < 6) *(B=0) THEN
1200
    
```

Always remember that the arguments MUST be enclosed in brackets.

You can have logical AND and OR in the same line

```

100 IF (A < 6) *(B=0) + (A < 6)
*(B=1) THEN 1200
is Basic SP 5025 for
100 IF (A < 6 AND B=0) OR
(A < 6 AND B=1) THEN 1200
    
```

A SPECTRUM CONSOLE THAT EVERYONE CAN AFFORD!

For about the cost of the average games cassette you can now have a truly professional console for your ZX SPECTRUM! At only £7.50 it's an incredible bargain, and will make your programming or playing so much easier.

How did we do it? By designing a unique method of self-assembly, and using relatively inexpensive materials!

The result is a console that's tough, light, professionally designed and very highly finished!

For instance: it is made of double-laminated corrugated board with a final laminate of tough, spongeable high gloss vinyl.

When assembled about 10-15 minutes it is completely rigid and tough enough to take years of useful work!

Of course, we designed into it all the facilities you would need for ease of use and performance... making it neat, tidy and good looking.

So why pay more for a ZX SPECTRUM console? Send today!

Power Pack internal or external

Complete access to rear of machine!

Fully illustrated instructions

Ideal position for ZX PRINTER or alternative storage for cassettes!

Rugged double-laminated corrugated construction assembled in minutes - lasts for years!

Ergonomic Keyboard angle - ideal for typing or playing games!

Rigid base for stability!

Full ventilation for Computer and Power Pack!

ONLY £7.50
(plus 75p post + packing)

Post today to Print'n'Plotter Products, 49 Borough High Street, London SE1 9SE or phone 01-660 7231 for credit card sales.

1K MACHINE CODE

SINCLAIR ZX81

Two Great Games on one cassette cleverly written in machine code, stretches your computer to the limit. Both have flicker free graphics, unbelievable speed and can become addictive

JUMP JET

You are flying a Harrier multi-roll aircraft, your task is to bring the deserted city to the ground, with ever increasing speed your task is anything but easy.

FORMULA ONE

Try and keep your formula one car on the track. As your skill increases so does speed.

Both with on SCREEN SCORING. Fully compatible with 1K and 16K machines.

Both for the inclusive Price of £3.50!

16K SPACE RESCUE

Play this 16K ZX81 version of the popular Arcade game and save the six remaining survivors from Moon Base Alpha.

For the inclusive price of £4.95

WANTED: Good quality software, top royalties paid.

**Allen Mine
£4.99**

IE Applications, 177 Castleton Road, Nottingham FE9 4DE

Anything for which the instructions include the line "Cheats Sometimes Prosper!" has to be worth a look.

Allen Mine has you digging for jewels beneath a planet surface while a tank shoots away at your base hut, behind a pile of stone blocks which will fall on you at the earliest opportunity.

If that isn't bad enough, the tunnels you dig are inhabited by wandering nasties who follow you around trying to end your miserable existence!

On-screen presentation is very good, being a flat cross-sectional drawing of the underground area around your start point. You have to tunnel away to reach the jewels buried beneath.

Instructions are sparse — you are supposed to work it out for yourself, apparently. Which you will do once you've been shot, buried, eaten alive and squashed a few times.

For a very simple game there are lots of ways to die in Allen Mine! I found it good fun and cleverly written. It will not go stale easily and the key layout is fairly easy to use. All in all, highly playable and recommended.

**Mad Martha
48K £6.95**

Mikro-Gen, 24 Agar Crescent, Bracknell, Berks

God help the designer if Womens Lib ever get hold of him! Mad Martha is a domestic adventure

game. The task is to escape the house and get into town for a night on the tiles.

Failure to clear the marital home quietly awakens the wife who proceeds to chop you up into cat meat! A neat little graphic routine cheerfully depicts the dismembering of husband Henry. (Nothing gory — honest).

The game itself is a Hobbit-type text/graphics mixture, wherein you are given a hi-resolution picture of your present surroundings and progress — or not — by entering commands such as "GET MATCHES" etc.

The program understands a fair number of words and is very easy to communicate with.

**Maze Panic
£4.95**

Silicon Software, 24 Short Lane, Stanwell, Middlesex

Frogger meets Pacman. In part one of this game you use the cursor key to guide Thomas Frog from bottom to top of the screen through a maze of slowly moving barge-shaped barriers.

Master this and you graduate to more advanced problems. Once again you have to climb the screen, but this time the maze takes a different form. It's not unlike a Pacman maze, which slowly narrows to make it harder and harder for you to gobble up the power points which are doited about.

This second stage is really quite difficult, and your admittedly less than nimble-fingered reviewer came nowhere near succeeding, so there's enough challenge to ensure the game's appeal will last.

Points are awarded during each part of the game, and a highest-score record is kept.

One particularly nice feature: you can examine the Basic program in order to make your own improvements, and each maze can be saved as a separate game.

**Space
Raiders
£4.95**

Pslon, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD

A good version of the ever-popular Space Invaders. Well-designed, smooth graphics, with an effective sound accompaniment.

You start with three guns, and another gun is said to be available after 1,000 points. To verify that, though, more expert hands than mine would have to

operate the controls which are the Z and X keys for dodging right and left, and the space key for firing.

Both the current and the high score are shown.

Though the principle of this game is well established by now, this implementation is particularly good. Worth the money on that basis alone.

**Scramble
£5.50**

Mikro-Gen, 24 Agar Crescent, Bracknell, Berks

This game presents you with an impressive menu, but the meal to follow is rather mediocre — a bit like ordering a Crepe Suzette in a five star hotel and being served a pancake with orange juice!

After loading, you are presented with a selection of speeds ranging from slow through normal to fast, and a choice of Missiles, UFOs, Meteors or the Fortress and Base

I duly did battle with all of the above-mentioned hazards at all the aforementioned speeds, but still could not whip up any enthusiasm for a second helping.

As an introduction to this type of game, maybe — though what an inexperienced player would make of the plane ploughing through mountains without any apparent damage I can't imagine.

Games of the unexpected for the unafraid

THE WHITE BARROWS

Somewhere amid this maze of barial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is, he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two. Your magic staff will block the tunnel to prevent him escaping unless, that is, he outwits you.

A real brain twister, White Barrows requires both brains and brawn from its players. It's no good just heaving your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon, and they don't hack easily! You'll need all your strength and cunning to survive this one for long.

THE WHITE BARROWS Only £6.50 all inclusive!

CELLS AND SERPENTS

More monsters than you ever thought could live behind your keyboard. Wander the hills in search of gold and glory but be very, very careful where you tread! There are things here that will make your wildest nightmares look like Julie Andrews. Fancy meeting a Mind Flyer, for example? Or how about shaking hands with an Amodeus? (You'll only do that once!) Treasure is here to be found, though, of the hard way.

See just how good you really are at adventuring with this practically unsurvivable fantasy. Not for the faint of heart or the slow of sword.

CELLS AND SERPENTS Only £6.50 all inclusive!

* SPECIAL DEAL *

Both programs for only £11.45 all inclusive!

Our Adventure Series programs are available on tape for the following systems:

Commodore VIC-20 (not available for White Barrows); Commodore PET, Sharp MZ-80A and MZ-80K, Tandy TRS-80 Model 1, BBC Model B or 32K Model A, Atari 400 and 800, Sinclair 48K ZX Spectrum.

ASP Software, ASP Ltd,

Time/Money
£5.50

Poppy Programs, Richmond House, Ingleton, Carnforth, Lancs LA6 3AN

The tape was supplied with a photocopied insert which contained brief but adequate typewritten instructions. Both programs loaded easily but did not auto-run — a disadvantage with programs for use with children. Good graphics, but only minimal use was made of colour and sound

Time displays a clock face and asks you to type in the time in word form. Several variations are accepted — six twenty, twenty past six etc — although only a set answer is given. I think a child aged between four and six (the age range the programs are written for) would find the reply "Yes, twenty five to eleven" to an entry of "ten thirty five" rather confusing.

Money shows pictures of various coins and asks the user to enter the different coin needed to make up a stated amount. The coins were confusing at first but soon became easily recognisable

Both programs had a value as a repetitive exercise. But for much less, you could buy a set of imitation coins and a clock face which would do the job just as well

Programs to make you and your family think

A selection of educational programs for all ages. Find out our reviewers' educated opinions of them

Garden Birds
£6.50

Hilton Computer Services, 14 Avalon Road, Orpington, Kent BR6 9A\

Was that really an Egyptian vulture in the back garden? This is the program to tell you ... but slowly. The idea is for you to answer the program's questions, and the program will identify the bird

It works well, but there are snags. It takes more than seven minutes to load the program to the point where questions start, at least five minutes for you to answer the questions, and, because the program is largely in

BASIC, about two minutes to sort out the answer. After all that time the bird has no doubt flown

The screen display is, like the packaging, amateurish

This really is a program in search of a purpose. A good book is cheaper, faster and has pictures; As a result of the way the program is written, it cannot be used as a bird data base either. Overall, disappointing in view of the amount of hard work that obviously went in to it.

IQ Test
£5.75

Flowchart, 62 High Street, Irthlingborough, Northants, NN9 5TN

The IQ Test cassette has two tests, one on each side. Each has 25 questions to be answered in 20 minutes, time to go and time elapsed being shown on the

The questions are typical multi-choice intelligence test items, some easy, some obscure — and at least one was wrong.

After the quiz the score is given, with a corresponding IQ rating, and the questions can be shown again with the correct answers.

The recording is low-level and high output is required to load successfully. However, the instructions are clear, and the program straightforward and easy to use

Test 2, however, insisted on starting again when completed, and some juggling was necessary to get the score and answers without being told "You haven't answered any questions yet, you dummy"

If you like this kind of quiz you will enjoy this cassette. But each test can really only be used once per person, and you may think that the price of £5.75 is a shade high for 40 minutes of intelligence test.

Chemistry
£10

Alchemy Software, 78 Tweendykes Road, Sutton, Hul, HU7 4XG

The program loaded first time, auto ran, and used colour, sound and graphics effectively. Each program was user friendly (often with a touch of humour) and was well error trapped

I did discover one bug — in the Compound program when

the computer gives the correct answer, it prints with the Over command on. As it prints across previous text, the correct answer seemed to be in Chinese! I corrected this by adding line 3000 over 0 and after this the program worked correctly check on this please, Alchemy

Designed to cover the more complex chemistry topics up to and including O level, the programs are

Formula, which will tell

you the formula of a compound you enter.

Atom to calculate the number of moles from the given mass of an element or vice-versa

Molecule to calculate the number of moles from a given mass of compound.

Compound works out formulae from moles

Mass works out masses in an equation

Volume works out masses and or volumes in equations

A first-class presentation of these topics, useful for use both at home or at school, with a well-written accompanying text. A ZX81 version is available

Use the power of strings to handle words

The ZX81 and the Spectrum share a powerful system of handling strings. Ray Elder shows how it works with two example games to type in

Both the ZX81 and the Spectrum use a string handling system which is different from most other microcomputers. It is not inferior and, in certain applications, has a distinct advantage.

A string is generally accepted as being a sequence of letters, characters or numbers, and is identified by quotation marks at each end.

It can be used directly as in:
10 PRINT "HELLO"

or assigned to a string variable as in:

10 LET AS = "HELLO"

By the use of the associated functions VAL, LEN, STR\$, CODE, slicing and concatenation (look it up in the manual!), we have a very powerful device.

A brief outline of these functions:

VAL will give the numerical value of the string if it consists of numbers

LEN will tell you how many characters a string contains

STR\$ converts a numerical variable or number to a string variable

CODE gives the value of the character's code (see manual appendix)

SLICING selects a character or group of characters from an existing string

CONCATENATION adds strings together

At first sight these seem of little use, but do not underestimate them.

Selecting a character or group of characters from a string is achieved by using one of

the following (presuming AS to be "HELLO")

a AS(5) selects one character or "element" of AS, in this case the fifth (0)

b AS(2 to 4) selects the second to fourth elements (inclusive) from AS (ELL)

c AS(3 to) selects from the third element to the end of the string (LLO)

d AS(to 2) selects from the start of the string up to, and including, the second element (HE)

If you are converting a listing for another machine to ZX then the following comparisons apply:

a MID\$(AS,5,1)

b MID\$(AS,2,3)

c RIGHT\$(AS,n)
n is the number of elements required counting from the END of the string: therefore AS(4 to) = RIGHT\$(AS, 2)

d LEFT\$(AS,n)
n is the number of elements counting from the start of the string, direct conversion from ZX, i.e. AS(to 3) = LEFT\$(AS,3)

The only real problem is e and an all purpose formulae for varying length strings is RIGHT\$(AS,n) is converted to AS(LEN AS - (n - 1) to)

The Spectrum has READ and DATA functions, but in

many cases these are easily simulated on the ZX81 by using strings. These techniques can also be used on the Spectrum, and, in some cases, provide an increase in speed over the conventional use of DATA.

Numerical DATA may be simulated by the following method, using VAL to convert the string variable to a numerical value.

10 LET AS = "327654918 etc (replacing 10 DATA 3,2,7)

20 LET A = VAL AS(X)

Where X is the required element of AS — for example, if you want the fourth item of DATA (element of AS) — X would equal 4, and so, at line 20, A would equal 6.

A slight problem occurs with numbers of more than one digit, especially with a set of numbers of varying digits (e.g. 12, 100, 5). This can be overcome by making all numbers contain the same amount of characters — padding smaller numbers with 0s in front.

For example: 150, 19, 7
Making each up to three digits: 150, 019, 007 (the value of 7 and 007 is the same)

Our string becomes

10 LET AS = "150019007"

And is READ by

20 LET A = VAL AS(X to X + 2)

X must start at a value of 1 and increase by a factor of +3.

In the above example
X = 1 then A = 150
X = 4 then A = 19
X = 7 then A = 7

DATA words can also be simulated by this method; as with numbers, all words must be of the same length. This time pad out shorter words by adding extra spaces to the end of the word:

10 LET AS = "WEEK sp sp TODAY MONDAYFRIDAY"

Select words by

20 LET WS = AS(X to X + 5)

Do not forget, X must increase by the length of the longest word each time — in our example this is six letters, therefore X must be 1, 7, 13 or 19.

You can also slice strings directly without first assigning them to a variable. This saves time and memory. Lines 10 and 20 could be written

10 LET WS = "WEEK sp sp TODAY sp MONDAYFRIDAY"(X to X + 5)

Unfortunately if you have WEEK or TODAY you also have unwanted spaces. One way of removing these is to include the code:

20 FOR I = 1 to LEN WS

30 IF WS(I) = "sp" THEN

GOTO 60

40 NEXT I

50 GOTO 70

60 LET WS = WS(TO I - 1)

70 REM rest of program

We will now create a subroutine to select a random word. I used three separate strings, one each for six-, seven- and eight-letter words and each containing 10 words. You can modify any of this to suit your own requirements, and even reduce it to one multi-length word string plus the "spaces" stripping routine.

Select a six-, seven-, or eight-letter word:

2000 LET Y = INT(RND * 3 + 6)

Select word from string:

2010 LET X = INT(RND * 10) * Y + 1

Go to correct string

2020 GOTO 2030 + (20 * (Y - 6))

Six-, seven- and eight-letter strings

2030 LET WS = "MONDAYFRIDAYSUNDAY AUGUST WINTER SUMMER ASTERSPRINGAUTUMNMOMENT"(X to X + Y - 1)

2040 RETURN

2050 LET WS = "TUESDAY WEEKDAY WEEKEND HOLIDAY JANUARY OCTOBER EVENING DAYTIME MINUTES SECONDS"(X to X + Y - 1)

2060 RETURN

2070 LET WS = "THURSDAY SATURDAY TOMORROW FEBRUARY NOVEMBER DECEMBER CALENDARMIDNIGHT DAYBREAK MORNINGS"

ZX81 AND SPECTRUM PROGRAMMING

(X to X+Y-1)
2080 RETURN

Here are two programs — Jumble and Hangman — to further illustrate the various uses of strings. Both need the

subroutine, 2000-2080, above as well as the listed code, and both are skeleton programs.

I leave you to add scores, players' names, routines and so on

Save time and temper with a helpful program

The BBC Music Processor BBC B £14.95

Quicksilver, 13 Palmerston Road, Southampton SO1 1LL

The BBC has a very sophisticated sound generating capability which tends to be overlooked, partly because programming music from Basic is a lengthy and complex procedure. This program takes out the tedium and lets you concentrate on creating music. Supplied with a well written, twelve page booklet, it took me about two hours to master the operating procedures.

All four sound channels can be used, the three envelopes adjusted, and speed, volume and many other controls are supplied, including a "recording" facility (with "dubbing", "erase" and "edit" on each "track"). Music can be saved on tape as a separate file.

The sound quality of the BBC speaker is poor, but with a modified system the results can be impressive — as the three supplied "files" demonstrate.

This is a beautifully versatile program which, as an ex-

These programs are designed to help you out, whether you're making music or meddling with memory. Before you buy, take a look at what our reviewers thought of them

musician (failed!), I found impressive and valuable. The screen displays the various parameters and settings clearly, the program is well error trapped, user friendly and provides good user prompts.

If there had been a facility to output to screen or, more importantly, to printer, a manuscript display of completed compositions, the program would have been perfect. (If Quicksilver can produce an additional program to work in conjunction with the 'file' program to do this — reserve me a copy!)

Shifty 48K Spectrum £5.50

Work Force, 140 Wilsden Avenue, Luton, Beds

With the cassette came a letter 15 inches long by 4 inches wide printed out using the Sinclair printer. To quote from it: "nobody can describe the standard Sinclair hardware as especially suitable for word processing, however, with some lateral thinking applied to the problem the main deficiency, the printer, has been overcome". What they mean is that any text over 32 characters in width (nor-

mal screen) is printed out sideways — hence the 15-inch-long letter.

A further quote: "we don't suggest anyone purchases Shifty as a dedicated word processor, but if your handwriting is like mine and you need to upgrade your presentation then Shifty will allow you to do this at an acceptable cost". My own handwriting justified me purchasing a decent second hand typewriter. I have just worked out that if I used Shifty and the Sinclair printer, my average letter would be about a metre long!

With the tape came four pages of instructions set up by using SHIFTY, but printed out on a normal (I use that word advisedly) printer. Even so, I found using the program a tedious task. My advice to the programmer would be to either join a company which specialises in word processors, or use his or her very obvious talents for fun programs for the home computer market.

Juggernaut/ Auto Load, Buccaneer, Mirage/ Pre-Loads VIC-20 £5.95

Novasoft, 46 Pheasant Drive Downey, High Wycombe, Bucks

Three cassettes with utility routines for VICs with any memory configuration.

Juggernaut enables you to relocate blocks of memory and, if desired, save memory to tape. As

such, the routine functions correctly.

My main criticism is of the slight misleading instructions. The author suggests that, provided you have RAM in the relevant block, you can store code in the ROM expansion area.

In order to do this, it is suggested that you may like to relocate your extra ROMs into lower RAM (a task apparently easily done by Juggernaut). I agree that it is simple to relocate the bulk of machine code, but there is no way that Juggernaut can relocate code which either alters the interrupt vector or uses a "Charge" wedge.

Since most extra ROMs use such techniques to add commands to BASIC, relocation of ROMs will be fraught with problems. Auto Load will boot code into the expansion ROM area should you want to use it.

Buccaneer is a copier program. With it you can make backup copies of software. It handled normal programs well but couldn't copy most of the protected software I tried.

Mirage enables you to reconfigure the memory map of your VIC. This is useful if you regularly alter the memory size and can't remember the easy way to do it.

Of greater value are the Pre-Loaders. These short routines are saved in front of a program requiring a changed memory map. When run the pre loader changes the memory configuration and boots up the main program.

Overall an average bunch of routines which would offer better value if they were all on the same cassette.

SOFTWARE REVIEWS

Gem Character Generator Dragon £8.65

Gem Software, Unit D, The Maltings, Station Road, Sawbridgeworth, Herts

This package is intended to make it easy for you to define your own character shapes to be used in the hi-res screen modes, and consists of two modules

The first enables you to define up to 128 different characters which can be saved as a data file. You also have the facility to read in and update this file at any time

To define your characters, you are presented with a 7 by 9 grid whose rows and columns are numbered. Each square in the grid can be filled in to define the character

As you are filling in this grid the character is drawn full size on another section of the screen so that you can see how it is taking shape.

Once you have completed the definitions the data is saved

on cassette, so you can build up a library of different character sets. For example, one set could include proper lower case characters, another could have scientific symbols, and so on.

The second module is a demonstration program, and also contains the routines that are used to read in the character data file and then to print any selected characters anywhere on the hi-res screen. The characters are held in a two dimensional array and are referenced by their ASCII value

An added feature is the facility to display your text vertically (that is, lying on its side), as well as horizontally. The demo program actually shows a sine graph with the axes rotated using both these formats

The character drawing is a bit slow but tips on overcoming this are given in the clearly printed instruction leaflet. C.D.

★ ★ ★ ★ ★

VU-Calc Spectrum £8.95

Pison, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD

At one time, it was thought that an attempt to run a spreadsheet program on a microcomputer must be doomed to failure. Yet VU-Calc has all the functions you need for practical use.

On a 48K machine, it provides a matrix of 60 columns and 60 rows, four columns and 16 rows being visible at one time. The visible part of the matrix can be moved rapidly to a new position, allowing the whole array to be examined. Each 'box' provides room for seven characters, but text can be over-run into the next box.

A box can contain text, a number, or the result of a calculation based on the numbers in other boxes, using a mathematical equation entered by the user. The usual four

mathematical functions available on calculators may be used, with brackets if needed

Operation is straightforward once the essential concepts have been absorbed, and the contents of the matrix can be saved on tape and later reloaded. The only problem encountered was that the 'EXAMPLE' program on the wide B failed to perform in a useful way, merely loading three ones into separate boxes, but a full array was loaded and restored without difficulty

There are so many possible ways of using this program that it may take some time to realise its full potential. One matrix already stored away safely gives practice races for Grand Prix drivers, another contains household budget details, and those were the product of the first hour of serious use! Only the imagination of the user imposes a limit to the possibilities.

CHARLY & DEMI for BBC A-B
Spelling game for all ages. 40 words, 4 levels, plus 8 Flashing letters. 4 levels, 4 levels deep. Full documentation for both the programs. £8.50

LANGUAGE TUTOR for BBC A-B SYSTEM 4/8/16/32 & VIC 20 (unexpanded)
The ideal program for the examination and English word. 40 words, 4 levels, 4 levels deep. £5.00

LANGUAGE DATA TAPE (for machines to store)
Available in French, hundreds of words arranged in groups ready to load into the computer. £6.00

READ ARROWS for BBC A-B
A spelling game for primary school. 40 words, 4 levels, 4 levels deep. A game with a real educational value. £5.00

ADDRESS BOOK for BBC A-B SPECTRUM
This is the one you have been waiting for. 40 names and plus use Menu driven. Includes search, add, alter, display. £6.00

DATAMASTER for VIC 20 (unexpanded)
A small but flexible database program includes a menu driven list of options like input, view, change, output, load, alpha sort and clear. Ideal for personal and club records. £5.50

THE GREAT IBERIAN CRYSTAL for BBC A-B
Are you tired of uncompromising adventures, if so, this one is for you! A unique game which will have you spell bound. Dare you let loose a mad dog on a man eating warlord? Will the spells work for you? £6.00

MILITAIRS for VIC 20 (unexpanded)
This is the final in class, you normally play with plastic pegs. Make your moves to leave the last peg standing in the middle position. Sounds easy doesn't it? Hours of family entertainment. £5.00

ZAXX for VIC 20 (unexpanded)
Shoot down the aliens with your laser. Not just from one angle but from three. Some good sound effects, great fun. £5.00

CORRA for VIC 20 (unexpanded)
Join the many of the hairy morsels can the cobra man. You can move in all four directions. Another fine game with sound, colour and more prizes. £5.00

Sniper – for the Dragon 32

Are you fast? ... are you good? ... can you shoot straight? ... Here's your chance to prove it. Not just another shoot 'em up game, but the ultimate in hit 'em fast, and hit 'em hard games – but this is no game ... your life is at stake!

Fast action machine code game, which calls for a steady trigger, and nerves of steel. 10 levels of difficulty joystick controlled gunsight, high res graphics and sound. "Smart" targets!

Game design and dragonware: R. Lowry

Cosmic Defender – for the BBC model B

"I thought I could do it ... now I'm not so sure, 'Hang on to 'em at all costs' were the orders from star command, it could cost me more than I bargained for! Even with the best star fighter in the galaxy!! I've got to hang on ... keep going ... must fight ... but for how long?"

Defend the federation Plasmaton fuel dumps from the mindless suicide pilots of the alien battlefleet. Use your cosmic starfighters weaponry and hyperspace to destroy the evil enemy ... but watch your fuel, bonus points and fuel cost blood!! How long can YOU hold out in this fast action game by Anthony Rafferty.

THE MISSING LINK

Acnean Mutoids – for the BBC model B

"Where am I?.. A reasonable question, but the shock answer is only the first in a series of catastrophes that might lie ahead ... A bolt of lightning stabs your eyes as the monitor awakes you from stasi-sleep, only to tell you the worst!

Your interstellar cruiser has been invaded by the evil race known as the acneans – even worse, you are alone!!

In a micro-instant you realise the task that faces you is one of spine-tingling terror – you must risk all to save earth from a horrific destiny. Can you avoid the blood dripping, plasma curdling mutoids and activate the ship's self destruct computer – do you have the courage? Can you save mother earth??, can you save yourself??? the answer is surely ... how??? Superlative graphics and sound make this game by Phil Woodrow, the ultimate challenge!

All of these superb games £6.50 each, inc first class post, packing and VAT.

All orders despatched within 24 hrs of receipt

Available from all good software outlets or direct from Soft Joe's.

Dealership enquires to:
Soft Joe's Software, Business Centre, Claughton Road,
Birkenhead, Merseyside.

Coming soon – games for VIC 20, Commodore 64, ORIC,
Spectrum and Atari. (Ref HCW)

Bandit – for the Dragon 32

Ruthless ... that's the only way to describe it, try your luck against the meanest fruit machine in the universe. 1,000 credits and you break the bank. It's not easy, but then, you wouldn't expect it to be would you???

You can almost feel your pocket getting lighter in this full feature fruit machine game. Based on a real 20 symbol per reel machine, this superb simulation displays excellent high res colour graphics and realistic sound – random hold and nudge facilities, with the meanest, most vicious gamble feature in the west! without doubt, the most compulsive addictive fruit machine on the market. Specifically for people with deep pockets and money to burn.

Copycat games for your micro

Championship Darts Dragon 32 £5.95

Shadow Software, 8 Hallgate, Thurnscoe, Nr. Rotherham

This clever implementation of the popular pub game makes it possible to get involved in the exciting atmosphere of a championship darts match without knocking chunks of plaster out of the kitchen wall!

The initial screen gives you the choice of starting play or viewing the instructions — which are almost unnecessary as playing the game is simple yet very effectively done. You start a match by entering the names of the two players and selecting who throws first.

The playing screens consist of a realistic dartboard drawn in hi-res, and an area that contains information on the players' current score, who is throwing, how many darts are left to throw, and a scoring table at the bottom of the screen.

Throwing a dart is carried out in two steps. Firstly, a spot moves very quickly around the dartboard and you select the number you wish to aim at by stopping that spot over that number by hitting any key.

Having done that, a small cursor moves rapidly across the scoring table which has doubles, trebles and so on marked on it, and once again you must stop the cursor to determine your score on that throw.

Sounds simple enough, but it proved to be an absorbing task trying to score that magic treble twenty! There are some simple sound effects in the game culminating in a splash of colour and sound when you hit 180!

| value for money | 85% |

Our team of reviewers assesses a selection of programs which mimic real-life games

Do Not Pass Go 48K Spectrum £5.50

Work Force, 140 Wilsden Avenue, Luton, Beds

In this computer version of the most famous board game in the world, the players no longer have to handle any money, or throw the die. These mental tasks are all done by the computer, leaving the kitchen table and the players' hands free for more important things, like drinking beer and eating sandwiches.

Leave room on the table for a small note pad, though, to keep track of what you have bought. Although the programme will give you a listing when asked for, it will not give you one when you most need it such as when buying houses etc.

Yahtzi 48K Spectrum £5.50

Work Force, 140 Wilsden Avenue, Luton, Beds

From two to six players can take part in the game, which is based on the roll of five dice. The screen display is divided into two parts, the upper half showing the faces of the dice from one to six, and the lower half poker dice scores from four of a kind to a high run. Each player has three "throws", with a hold on each die if required.

At the end of the three throws you must take an option according to what is on the dice faces — so if you have four sixes you can take the sixes option or the four of a kind option, but the

Almost everyone must know how to play this game, so all you have to do is respond to the computer prompts. You should have no problems when loading, and there is a SAVE option which has certainly got the edge on the original game. Remember having to pack it up just when you were winning?

The layout of the board is on screen all the time you are playing. One small criticism of the graphics — some of the displays are difficult to read because of an ill-chosen combination of paper and ink. Other than that, it is as playable as the board version and still very a good family game for wet Sunday afternoons (at least, that's when we play it).

B.B.

| | |
|-----------------|------|
| instructions | 60% |
| playability | 90% |
| graphics | 70% |
| value for money | 100% |

option can only be used once. A chance option gives you the value of the five faces of the dice added together. Five of a kind gives you a Yahtzi.

Two points that annoyed me. There is a printed line informing you that you should use keys 1 to 5 for holding, and I would have liked to have seen a longer delay for the print on screen. And at the point when you have completed your three throws, the game positively races on to the next player's go — a longer delay before moving on would be a great improvement.

Golf Dragon 32 £7.95

Salamander Software, Dept C, 27 Ditchling Rise, Brighton

This game offers you the choice of a straight matchplay competition between two players, or a one player game using the Stableford points system. All rules and general instructions are adequately explained in the four page leaflet, and I found it worthwhile reading it fully before starting a game.

The extra hazards you would expect in a real game of golf such as the wind and the rough have been simulated to make the game as realistic as possible. The colour graphics on the Dragon are used to define the fairways, of which there are nine different layouts, and the traps you must avoid such as bunkers and out-of-bounds are highlighted clearly enough.

A match can consist of nine or eighteen holes. On each stroke you are first given the chance to choose the direction you wish to hit the ball, and this is followed by a selection screen on which you choose your club for the stroke and how hard you want to hit the ball. Once you've reached the putting green you are given a full hi-res display showing the hole and the position of your ball.

Doing my first round proved that I've never been on a golf course before, but this game was simple to play — even though I was given a handicap of twenty-two! You can also select your own handicap if you wish. Overall, a good simulation of the game that would interest both the pro and the raw beginner.

C.D.

25 great programmes on one pack — Star Wars, Carrying Machine, Breakout, Trap It, Population Simulation, Corridor of Doom, Houshreak, Towers of Hanoi, Butterfly Chase, The Vault, Yatter, Maths, Calendar, Amazing 3D Maze, 3D Noughts & Crosses, Jackpot Bards, Hangman — musical, bible, history & sport, Mastermind, spelling, Darts, Razor's Edge and Time Warner. We only have room here to fully describe one programme, please don't hesitate however, to phone or write for full details of all the programmes.

HOUWBREAK:— You have entered a house at night in an attempt to rob it of Money and any Gold and Silver items. It is very dark and you must avoid bumping into the furniture. After a period of time an alarm will sound and soon after this the lights will be switched on. A noise dog is then released. You have to use all your skill and cunning to avoid getting bitten as the dog chases you around the house. Any items caught by the dog will slow down your escape. The game is played in real time and has excellent graphics. A different house is generated each time the game is played.

The full cassette of 25 programmes is sent to you for only £8.95!

Mind games for your micro

These new releases all demand cunning, not brute force. Our review team give you their ratings after pitting their wits against them

Pioneer Trail 16K ZX81 £3.95

Quicksilver, 13 Palmerston Road, Southampton

Billed as a "Mind Game", Pioneer Trail is set in America in 1847. Your objective is to travel the 2,000 miles from Missouri to Oregon, but your funds are limited, and there are sundry hazards to hinder you.

Your control over the game is mainly in making constant decisions on whether to stop and stock up with more food, clothes, supplies and what have you. Too little and you starve/freeze/die of snakebite for lack of serum. Too much and you risk losing the lot in a buffalo stampede.

Apart from that, the game pretty much carries on without you.

For example, "You see travelers in the distance", announces the screen. "They look hostile. Do you want to fight/run/build a barricade/continue?" Don't fret too much about which to choose — it makes no difference

Inkosi BBC B £5.95

Chalksoft, Lowmoor Cottage, Tonedale, Wellington, Somerset TA21 0AL

You are the head of that well-known tribe, The Inkosi, and your aim is to rule successfully for ten years.

As ruler you are nearly all-powerful

While being a successful leader means trying to maximise the amount of food and cattle available to the tribe, problems and calamities are not far off. War, harvest failures, the witchdoctor, hunters & raiders, rats, and different rates of population growth, all underline the point that a leader's life is not always an easy one!

If more than one third of the tribe starves or the population grows to more than 3000, then the witchdoctor quickly ends your leadership days.

Unless you choose to fight — in which case you get into shooting match

What you have to do in these is press, as fast as you can, the key corresponding to the letter number a creature moving across the screen. When it comes to telling the ZX81's S from 5, or Q from zero, it's mainly a test of how well you've adjusted the tv. I found I could do quite badly at this and still be told: "Good shooting. You scared them off"

Worse still are the little messages that flash up. "Rattlesnake!" it says. Then before you've had a chance to finish reading the message, let alone do anything else, it announces "You killed it". Who, me?

Never being good at balancing my budget at the best of times, I invariably starved to death after 900 miles or so, whichever of the 20 levels I played on

Miner Newbrain £8.50

Computasolve, 8 Central Parade, St Marks Hill, Surbiton Surrey KT6 4PJ

Making an entertaining game without sound or colour — today's market is hard, so Newbrain users will be pleased to find both entertainment and educational qualities in this package.

The 19K of coding and interesting use of the low resolution graphics available in the Newbrain along with hardware editing facilities must add to the good value

If you expect just "load" to work, it won't, so read the sparse but adequate instructions carefully. If it doesn't run without error, try adding a piece of code (FOR N=1 TO 244 CLOSE/N NEXT N)

Miner itself is an enhanced form of Monopoly, in which you have to beat a target you set yourself in a time you set yourself and at a choice of three speeds

You are given mine workings at the start of the game and the opportunity to add to these as well as transport facilities to get the units of production from the mine to a wharf and then warehouse

The value of the units increases depending on their location, but in moving them by lorry, barge or ship you incur the random possibility of piracy, accident and disaster. As your funds increase by selling units you can add more workings and transport to make your income mount up faster.

SPACE
TRADER
for the
New Brain

COMPUTASOLVE

Star Trader Newbrain £8.50

Computasolve, 8 Central Parade, St Marks Hill, Surbiton, Surrey

"Perpetual Insignificance" is the cost of failure in this text adventure game. Starting with a modest 1000 credits and five cargo shuttles, you have 40 days to make a profit so vast that your sponsors will consider worthy of membership in the Federation of Space Traders

Three well-presented text screens give full information on the current prices in the solar system, details of shuttle journeys and cargoes, and shuttles between the planets. Helpful prompts assist in buying and selling, and 'news flashes' tell you of events affecting prices, journey times, or cargoes

After 40 'days' the computer evaluates your performance

The program loaded easily from cassette and included a page of on-screen instructions and information before starting the game. No bugs were found, but there was one annoying spelling mistake (WNAI instead of WANT) and when playing at the fast speed some of the news flashes 'flashed' so briefly it was impossible to read them

Generally an interesting and unpredictable, but slightly overpriced game of interplanetary commerce.

Fore! The real way to play golf on screen

Many computer golf games allow you to play in ways that just aren't realistic

For example, you would not use a driver to extract a ball from a bunker. Yet this is often allowed

In my game, which runs on 16K on the Video Genie and TRS 80 models I and III, I have tried to be as realistic as possible

These restrictions are built in

- If the ball is in a bunker the proper club must be used or the shot will be fluffed

- In trees you are given the choice of playing the shot — with a 50 per cent chance of success — or dropping out with a one-stroke penalty and having the ball moved clear

Variables

SO start address of video memory (constant)
 BX, BY X, Y ball co-ordinates
 FX, FY X, Y flag co-ordinates
 H hole number
 NP number of players
 P player number
 SS stroke play or match play indicator
 WA two dimension array holding the "from" and "to" limits of any water hazard on the current hole
 WS first dimension subscript into WA
 TA, TS as above, but for tree hazards
 DH distance hit
 WE wind effect
 WD wind direction
 AN angle for shot
 AO angle offline
 CL club
 NX, NY Horizontal and vertical ball movement, calculated from distance hit and angle
 X, Y NX and NY converted to number of graphics blocks
 XU, YU unsigned values of X, Y
 OB out of bounds indicator
 CA card array, holds strokes taken by each player and par for hole
 The following are all two element arrays holding the indicated data for each player:
 PS players initials
 PT problem type
 BX, BY X, Y ball co-ordinates
 BP absolute ball position (screen location)
 OC Old contents of screen location
 ST strokes taken on current hole
 The few remaining variables are used as temporary storage

You'll believe you are on the golf course with a club in your hands. Mike Parks wrote his realistic golf game for the Video Genie and TRS-80 models I and III. All that's missing is the clubhouse . . .

- If the ball lands in water or out of bounds — off the screen — a penalty stroke is added and the ball re-played

- Trying to use a wood out of the rough will result in a fluffed shot going only 20 yards

To add more realism two players can take part and use either the stroke play or match play system

A randomly generated wind force and direction for each hole makes the game reasonably difficult and adds variety for new games

After inputting number of players and scoring system, each player is asked which is to give most problems

Hook or dice means the ball is deflected left or right by up to 20 degrees respectively, except when putting

Poor distance reduces each shot by 20 per cent

Problems with bunker shots means a sand iron will be the only effective club from a bunker

Putting problems means putts will vary in distance up to 20 per cent

When the first hole is displayed you are asked for club and angle — club details are continuously displayed. If using an iron, percentage of swing is entered, NEWLINE giving 100 per cent. Angle for the shot is between 0 and 180 degrees positive (up) or negative (down), NEWLINE giving 0. Club selection can be aborted by inputting an asterisk as percentage or angle

The game uses the normal

Conversion hints
 My program uses a combination of pixel graphics and ordinary characters for each hole's payout. The Video Genie and TRS-80 have a resolution of 128 by 48, so compare this with your computer and see how sec, flag, trees and so on can be formed.
 The data statements in lines 25-30 will have to be changed. Establish a suitable scale and change the value by which ball movement is divided in lines 185-195.
 Lines 190 and 195 check if the ball has moved off screen, so you will have to change the values 10 and the maximum X and Y co-ordinates of your screen.

How it works

5-15 definition and DIM are used
 20 moves ball one position
 25-90 sub-routines for the hazards
 95-105 draw layout of one hole
 110-135 initialisation: requests number of players, players' initials, stroke or match play, difficulty
 140-150 draw hole layout, print text, generate and display wind direction and force
 155 request and input club and, with iron, percentage of putting
 160 requests angle of shot (GOSUB 500), increments and displays strokes (GOSUB 495), checks if ball is in bunker and, if so, whether club is suitable
 165 checks if ball is in trees and randomly determines result of shot
 165-180 calculates distance hit and adds angle offline, calculates X, Y values for wind
 185-195 calculate X and Y values for shot, check if off screen
 200-215 move ball across screen
 220-235 check if ball was out of bounds or in water, if so reset and increment strokes
 240 checks if ball is in hole, if so updates score card and displays message
 245-260 check if any ball is in hole, otherwise see which ball is furthest and set player code
 265-280 check if ball is on green. If so, request putting strength and calculate distance
 285-315 check, display status of ball. If in trees, option to drop out or play. On drop out move ball up or down until clear
 320-345 executed at end of each hole, show status so far and determine who leads off next
 350-385 executed at end of game, display scores
 390-410 text strings (see 240)
 415-445 sub-routine flashes ball at current location and question mark at location given by QP and wait for input
 450-475 checks if ball is in hazard. Old contents (OC) value used to check for bunker or rough and boundary arrays for trees or water
 480-490 calculate distance from hole
 495 increment and display strokes
 500 request and input angle
 505 clears previous club details, displays which player's turn
 510 delay sub-routine
 515-565 data for layout of each hole
 570-585 instructions

VIDEO GENIE/TRS-80 PROGRAM

Plays with the player furthest from the hole playing first and the winner of each hole teeing off first on the next hole.

At the end the score card shows par and strokes taken for each hole and, for match play, holes won, lost and halved.

There are nine holes, but more can easily be added or layout changed.

Hazard type codes: 768 water, 769 trees, 770 bunker, 771 rough.

The tee position cannot have an X value greater than 122 and the Y value must correspond to the centre of a graphics block.

The flag position must be at least six cells down from the top of the screen or 18 cells up from the bottom and at least 12 cells in from the side.

The "from" and "to" points for water must be divisible by three, for trees divisible by five and for rough divisible by four. If a single tree or clump of rough is required then the "from" and "to" are made the same and they are always the same with a bunker.

You should be able to see how the data statements work by plotting them onto a worksheet.

```
100 INPUT "HOLE NO. 1-9"; HOLE

GEM SOFTWARE

for LYNX, DRAGON, SPECTRUM & ZX81 Software.
HCW12

MONSTER MINE by W.E. MacGowan.

Escape from the mine with as much money as you can, but don't get chased in our lair by the prowling monsters. An addictive machine code game, with superb graphics and save facility.

Price.....(LYNX & DRAGON).....£7.95
Price.....(SPECTRUM & ZX81).....£4.95

SULTAN'S MAZE by Christopher Hunt.

Enter the 3D Maze in search of the Sultan's jewels, but beware, your strength may run out, or, you may come face to face with the Mad Guardian. A multi-difficulty game with fantastic graphics and sound.

Price.....(LYNX & DRAGON).....£7.95

GEMPACK IV by W.E. MacGowan.

Two great machine code games, with full colour graphics. In *Sea Harrier* you must land your plane on the aircraft carrier, after dispersing the clouds with chemical bombs, but don't hit the ship!

In *Sub Chase* you must depth charge the wolf pack without being sunk. Both with 4 levels of play from easy to kamikaze!

Price.....(LYNX & DRAGON).....£7.95

CHATEAU by Pete Allen.

A new type adventure, in which you must wander the Count's old mansion in search of treasure! Of course, when the Count died and hid his treasure, he also left lots of unpleasant surprises for those brave enough to try and seek out his riches! Come face to face with Ghouls and Ghosts, Vampires and Trolls; do you run or fight? Will the mysterious Travel Agent suddenly appear and whisk you away to far off places? Where can you find the key to the lamp? Is the clock bobby-crapped? Will you die a cold and lonely death, or will you win through to claim the fantastic treasures of The Chateau?

Price.....(DRAGON).....£7.95

FUNMATHS I by Peter Chase.

Improve your maths while you play these five great games! In *Number Race* you must beat the computer, or a friend, to exactly 100 by eating the numbers. *Marks Maze* asks questions as you work your way around the maze. *Chemist* is a game of ratios, where you mix two chemicals, trying not to get blown up! *Dragon* exercises your skill at expressing co-ordinates — you have to find the Dragon, hidden in a grid. Last, but no means least, *Simon* tests your memory for tunes/colours/numbers.

Price.....(DRAGON).....£9.95

LYNX COMPUTING BOOK by Ian Sinclair.

Excellent book, which the beginner will find an invaluable aid, in helping to unravel the LYNX's many varied features!!

£6.95

All titles available mail order or Access. All cassettes despatched by return of post.

Kiltdale

At Kiltdale we don't treat computer program duplication as a side line. We are the specialists.

Since we started three years ago, we have developed a dedicated data duplication service that is second to none.

We developed specialist machinery and installed it in a clean air environment. Couple this with our tape, specially formulated for data. Add rigorous quality control and our product and service speak for themselves. No job is too large or too small. So if you are looking for data cassette duplication, why don't you call us?

JET PAC FOR 16 or 48K SPECTRUM

The 'Acme Interstellar Transport Company' is delivering
 spaceship kits to various planets throughout the Galaxy, and
 as chief test pilot, all you have to do is assemble the rockets and
 and thrust onto a free trip across the Galaxy and
 often get the chance of a free trip across the Galaxy and
 space travel is on, so expensive, now a chance to get
 right you might collect the odd sack of precious gems,
 on your journey, collect the odd sack of precious gems,
 elements or gold, and take them back with you.
 Upon-landing, you will find yourself equipped with the
 very latest JET PAC, plus Megga powered, quad
 Photon Laser Phasers, to blast any nasty, mean, little
 aliens who might object to your visit. And my! do
 those aliens get upset, without so much of
 their valuables, and sneak off, as a by-your-leave.

JET PAC Arcade standard, 100% machine
 code. Incredible sound effects, amazing smooth
 high resolution visual graphics, the totally new
 addictive concept and all those extra people
 you expect from the ULTIMATE GAME.
 Now you know why 'ULTIMATE
 PLAY THE GAME'

JET PAC the game to play all the way.

100 FREE PROGRAMS

FROM SILICA SHOP — WITH EVERY PURCHASE OF AN

ATARI 400 800

ATARI PRICES REDUCED!

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

| | |
|------------------------------|-------------|
| ATARI 400 with 16K | £159 |
| ATARI 400 with 48K | £228 |
| ATARI 800 with 48K | £349 |

400/800 SOFTWARE & PERIPHERALS

Don't buy a TV game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.
